The benefits of using EGGER structural flooring:

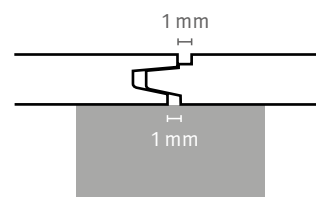

Saving costs and time

- Quick installation due to the panel width of 675 mm, the optimized tongue & groove profile as well as the accuracy and squareness of panels
- Low glue consumption due to reduced number of joints
- Ideal construction material to efficiently renovate and refurbish old wooden and concrete floorings

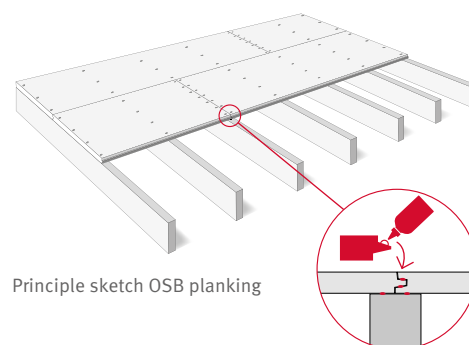

Optimized tongue and groove profile

- Simple installation to the last corner due to the asymmetric tongue and groove profile
- The integrated 1 mm expansion gaps ensure panel flatness in changing ambient air moisture conditions

Safe to use

- High overall stiffness of construction due to higher panel width and strong 4 sided tongue and groove
- The reliable high density greater 600 kg/m³ and the precise edge milling of EGGER OSB tongue and groove panels guarantee a strong panel interlocking and an increased edge-breaking resistance during transport, handling and installation
- “This side down” stamp printed on the backside of each panel supports proper installation
