

CE DECLARATION OF PERFORMANCE

according to Regulation (EU) No. 305 of the European Parliament and the Council of 9 March 2011

DOP no.	DOP-735-00
1 Unique product identification code:	735 (recipe no.) 6 to 40 mm (panel thickness)
2 Use:	Structural or load-bearing components for indoor use in dry and humid conditions
3 Name and Manufacturer Registered trade name or registered brand and contact address of the manufacturer:	EGGER OSB 3 E0 SC EGGER România SRL Str. Austriei 2 RO-725400 Rădăuți, jud. Suceava web: www.egger.com
4 not applicable	
5 System for the assessment and verification of constancy of performance of the building product:	System 2+
6 Harmonized standard:	EN 13986:2004+A1:2015
Notified body:	no. 0766 eph – Entwicklungs- und Prüflabor Holztechnologie GmbH Zellerscher Weg 24 D-01217 Dresden web: www.eph-dresden.com

The product performance according to number 1 corresponds to the declared performance according to number 7. Solely the manufacturer is responsible for drafting the declaration of performance according to number 3.

Signed for and in the name of the manufacturer by:

A handwritten signature in blue ink, consisting of a large loop followed by a horizontal line and a short vertical stroke.

*) Note:

- a Without air gap installed directly on products in classes A1 or A2-s1, d0 with a minimum raw density of 10 kg/m³ or at least products of class D-s2, d2 with a minimum raw density of 400 kg/m³.
- b An underlayment made of cellulose thermal insulation material of at least class E may be used if installed directly behind the wood-based material; however, this does not apply to flooring.
- c Installed with air gap behind, the product bordering with its rear side the empty space must correspond at least to class A2-s1,d0 with a minimum raw density of 10 kg/m³.
- d Installed with air gap behind, the product bordering with its rear side the empty space must correspond at least to class D-s2,d2 with a minimum raw density of 400 kg/m³.
- e With the exception of flooring, the class also corresponds to veneered, phenol and melamine-faced boards.
- f A vapour barrier with a thickness of up to 0.4 mm and a mass of up to 200 g/m² may be installed between the wood-based material and the underlayment if there is no air gap in between.
