

Safe in any situation

Antibacterial surface property

Did you know ...?

... that products from the EGGER Decorative Collection have an antibacterial surface property?

Bacteria is transmitted from person to person or via objects and surfaces. For this reason, special requirements are needed in furniture and interior design: Easy cleaning as well as the antibacterial property is very important.

Our products with antibacterial surfaces:

- Tested high antibacterial surface property for
 - Eurodekor melamine faced chipboards
 - PerfectSense Matt & Gloss lacquered boards
 - Laminates, Laminates XL, PerfectSense Topmatt, Laminates with coloured core, Laminates Flammex, door size laminates
 - Laminate bonded products such as worktops, splashback panels
 - Compact laminates
- The hygienically sealed and closed surface of this product is 99.9% germ and bacteria free 24 hours after being cleaned and sanitized. (ISO 22196)
- Tested according to ISO 22196 / JIS Z2801 and certified by „Hohenstein“, an independent testing institute.
- An antibacterial surface property is achieved through the thermoset hardened melamine surface.
- Please note that the surfaces must be cleaned and disinfected regularly. The antibacterial property does not replace cleaning or disinfection. Without regular and prescribed cleaning, dirt and possible biofilms inhibit this property.

GOOD TO KNOW:

- Certificate available
- Design paired with safety:
The EGGER Decorative Collection offers design freedom in areas where an antibacterial property is required.
- Antibacterial surface property available in the proven EGGER material and decor match
- For use in public buildings: Availability of the antibacterial surface property even with flame-retardant (Flammex) and moisture-resistant products (Hydro).
