

MORE FROM WOOD.

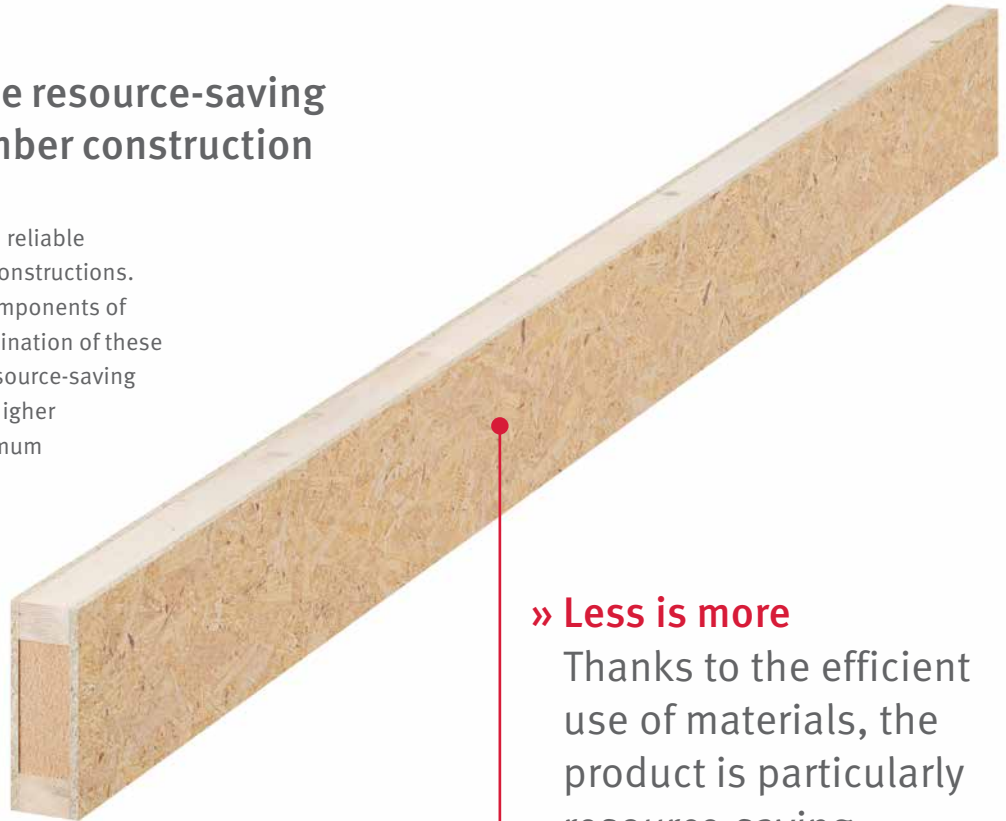

Dimensionally stable
and sustainable

EGGER EcoBox

EGGER EcoBox – The resource-saving stud for modern timber construction

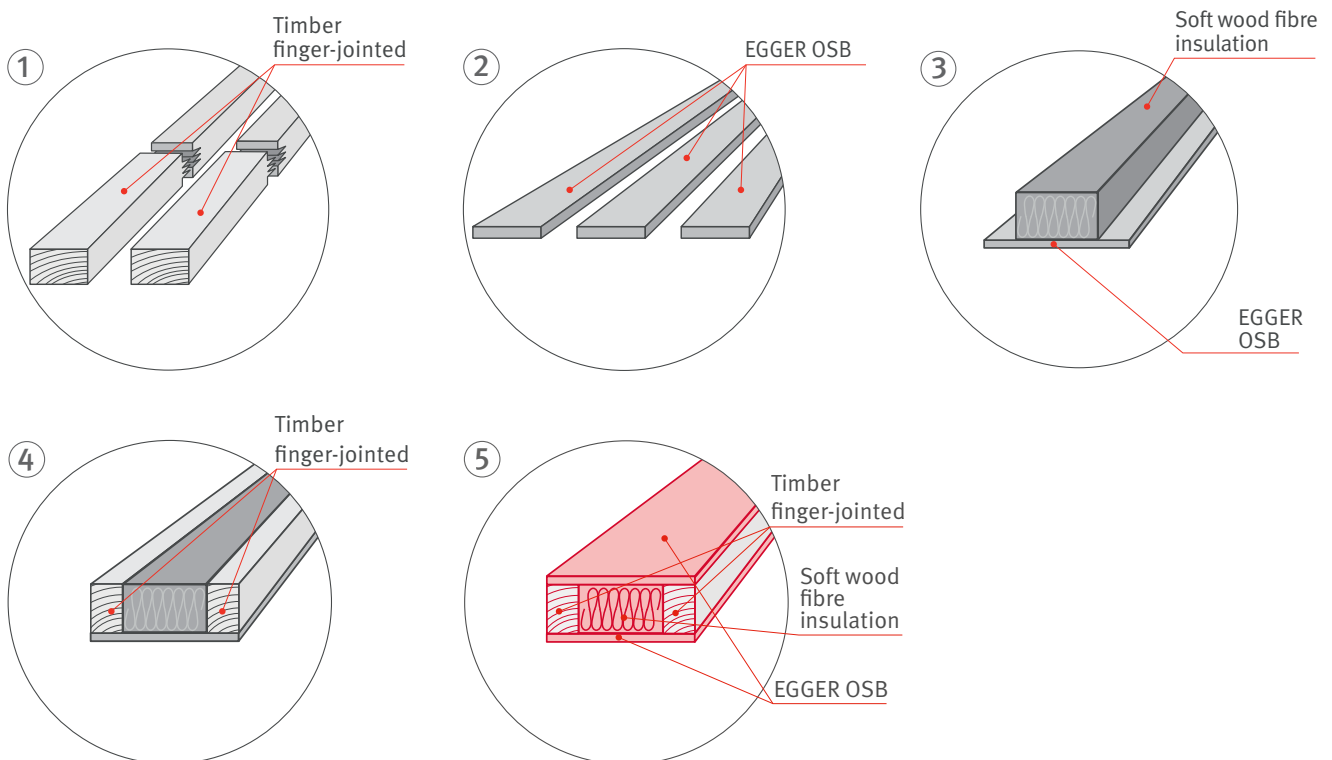

EGGER OSB and EGGER timber are reliable products for high-quality timber constructions. Both products are now the key components of our new EGGER EcoBox. The combination of these materials enables modern and resource-saving wood construction. Benefit from higher process reliability thanks to optimum dimensional stability and consistent quality - even in industrial, fully automatic fabrications.

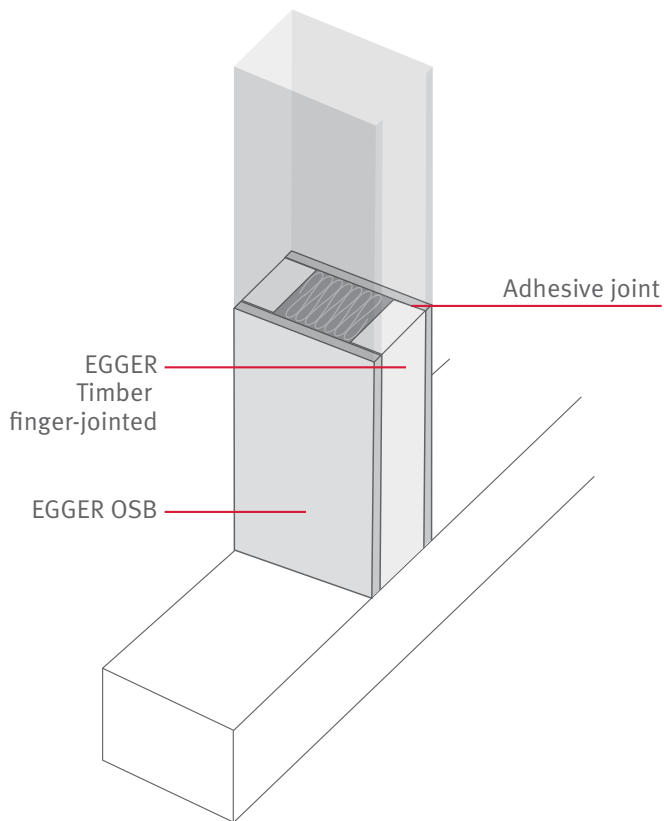

» **Less is more**
Thanks to the efficient use of materials, the product is particularly resource-saving.

Composition of the EGGER EcoBox

This new product benefits from the use of our high-quality products. Thanks to the combination of EGGER OSB and EGGER timber from our own plants, the EGGER EcoBox is always readily available. This enables us to meet the needs of our customers.

Advantages of the EGGER EcoBox

- Lower consumption of resources leads to **higher sustainability**.
- **Reduction of thermal bridges** thanks to better insulating properties.
- The light weight structure allows **easier handling and more efficient transport**.
- Increased efficiency in processing due to **higher dimensional stability and accuracy**.
- Standardized industrial production ensures consistent **high quality**.
- **Greater safety in planning, application and structural** use thanks to European approval.
- **Modern, large support cross-sections** expand the range of component thicknesses.
- Familiar production process thanks to the **rectangular cross-section** of the EcoBox.

The EGGER EcoBox in use – the innovative alternative in timber frame walls.

Compared to solid timber, the efficient material combination of the EcoBox means less raw material is used. In addition, weight is also reduced.

Up to **38%** less wood used

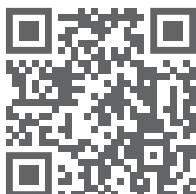

Weight reduction of

150 kg/m³

The EGGER EcoBox in the prefabrication of timber frame walls.
